

Liquid CR Marble

CR-Liquid Marble, an original product line from Concrete Revolution, LLC, is a zero VOC, seamless 100% solid epoxy coating system. CR-Liquid Marble cannot be replicated and is customized to your specific request. The final result is a smooth, seamless and glass like appearance with a subtle reflective feature, providing a glossy and deep-looking floor which contains a variety of colors and visual appeal. The three-dimensional appearance provides illusions of craters, ripples and swirling rivers of metallic-looking lava.

What separates CR-Liquid Marble apart from other similar products? It's simple - our 3-step coating process which saves cost and time. After countless hours of research and development, Keefe has formulated the perfect blend of viscosity and cure times paired with the appropriate sizing of our metallic pigments, giving CR-Liquid Marble it's unique 3-dimensional movement, without the addition of any solvents or chemicals.

CR-Liquid Marble provides the confidence and proven results that consistently meet the quality expectations of our team and trusted clients.

CR-Liquid Marble Features & Benefits

- Dense surface resistant to bacteria and moisture
- Easy to clean and to maintain
- May apply several layers on itself
- Seamless solution, eliminating grout and joint lines
- Sustainable through high traffic areas
- Contains no solvent (no VOC), allowing for interior application without harmful odors
- Excellent adhesive properties, allowing application on other firm and hard coatings, as well as a good bond to the substrate
- Improved self-leveling properties
- Increased abrasion strength
- High-impact resistance
